

Are you overpaying Demand charges at your Business facility?

A turnkey Power Factor Correction Project could eliminate costly penalties, decreasing your annual bill by 10-20%.

Questionnaire to determine if you're paying Power Factor Penalties:

1. What is the total cost for a recent electric bill, and what month was it?
2. Is sales tax assessed on the electric bill?
3. What is the type of facility: industrial, small commercial, large commercial?
4. Do the electricity bills get more expensive during part of the year, such as the summer (due to air conditioning), or winter (due to electric heating)?
5. For a recent electric bill, what is the amount of Energy Consumption (KWH)?
6. For a recent electric bill, what is the amount of Demand (KW or KVA)?
7. Is the Power Factor (or PF) listed on the bill? This is usually a number that ranges from 0.50 to 1.00, or 50% to 100%.
